Listen, I know that you get barraged with tons of stupid ads that promise all sorts of things, but below is a link that actually helped me make all sorts of money on the Internet with my [Electric Bikes and Scooters](#) site. I usually don't recommend resources unless they actually work and rather than give you a whole block of slick ad copy, I posted the link to the *video* below:

[Everyone Laughed at Me When I Said I Had a Website That Made Money...Until I Showed Them All of My Checks!!!](#)

The Urbanmover SX 70 USurfer Powerboard

If you want to talk about unique products, that exceed all boundaries of excellence, then you really need to take a look at Urbanmover's line of electric bikes, electric scooters and electric skateboards (also known as Powerboards). The Urbanmover SX 70 (UB SX70) Powerboard can easily be called fun on 4 wheels! This electric skateboard can propel you along at brisk speeds over all sorts of terrain. I have seen it drive over puddles of water, travel through grass on football fields and of course, concrete where it can really move out.

[Urbanmover](#)

This board has a wireless controller that you hold by hand which controls the board's speed and breaking. The controller is designed so that if another person has a similar board near you his controls will not interfere with your controls signal. If you jump of the board, thee is an automatic breaking system that will help your prevent collision with whoever or whatever you are trying to avoid. The direction, much like a regular skateboard, is determined by which way that you lean on the board.

Below are some of the Urbanmover's specifications

- Unique **wireless** electronic **ABS** motor **regenerative** braking system (AMBS)

- Unmatched and unique **36V 800W** power capability

- High torque, low profile, rare earth magnet **high power motor**

- Auto encoding **wireless** receiver - all remotes auto-operate with any board

- Automatic **digital** coding for wireless remote controller (encrypted frequency for each use)

- One digital **wireless controller** for all models with no inter-board interference

- Automatic **ABS regenerative braking** if rider jumps off board - providing **auto anti-collision**

- System **auto self test** (AST) and digital remedial reset system (DRR)

- **Auto shut-off** for period of inactivity or if low battery state occurs

- **Patent pending** on wheel train, wireless control system and low profile motor

- Fully **CE** certified

RE: Urban Mover's New Updated Web Site

I have to confess, I am a big fan of the company [Urbanmover](#). Not only do they have great products like their impressive electric bikes and electric motor scooters (They refer to them as electric motorbikes) but they also carry the coolest electric skateboards (which they refer to as power boards). Anyway, I was cruising around the net today and I noticed that they streamlined and updated their site. As a web designer and mostly a marketer, I noticed that they did a very smart thing. They used a super simple method of presenting you with a website interface that allows you to make 3 simple choices when you go to their site and in my humble opinion, this is a very smart thing to do because you can go straight to whatever it is you most desire to

see. You have the **Electric Bike** section **The Electric Scooter** and my personal favorite, the **Powerboard** section.

In my case, I love the Powerboard portion of the site because it is such a cool product, combining the fun of a skateboard with the power and speed of an electric bicycle. And when I say power, I mean power. I personally wouldn't ride one without a helmet and some knee pads because these electric skate boards can really move!

Anyway, I just wanted to tell you about [Urbanmover's](#) site because it is so totally awesome that I can't believe it! Oh, one other thing, they have loads of online streaming videos so that you can watch their products in action. To take a look at [Urbanmover's](#) videos, [CLICK HERE!](#)
